SUMMARY

Detail oriented Software Quality Assurance Engineer with professional experience in manual and automation testing, API validation, and SQL based data verification. Skilled in designing and executing test plans, defect management, and cross functional collaboration within Agile environments. Hands on expertise with Playwright, Postman, and Cypress, with a strong foundation in building scalable test automation frameworks using JavaScript. Passionate about delivering high quality software through structured QA processes and continuous improvement.

CORE COMPETENCIES

Core skills: Manual Testing, Test Plan & Test Case Design, Regression Testing, Smoke Testing, Functional Testing, Integration Testing, System Testing, UAT, Exploratory Testing, API Testing, Defect Lifecycle Management, SQL Data Validation, Agile/Scrum, Root Cause Analysis, STLC
Automation: Playwright, Cypress, Selenium WebDriver (Basic), JavaScript, End-to-End Testing, Automation Framework Design
API Testing: Postman, REST API validation, Response Validation, Backend Verification, JMeter (Basic Load Testing)
Bug Tracking: GitHub Projects, Jira, Agile/Scrum, Sprint Planning, Cross-functional Collaboration
Database: Oracle, MySQL, SQL query writing, Data Validation
Version Control: Git, GitHub, GitHub Actions (Basic),
Reporting: Playwright HTML Reporter, Test documentation

WORK EXPERIENCE

Software Quality Assurance Analyst

05/2024 – 06/2026
Dhaka, Bangladesh

Data Edge Limited

- Designed and executed 80+ functional, regression, and smoke test cases for enterprise system enhancements, identifying defects before UAT and supporting successful production releases.
- Validated complex data migration accuracy using SQL queries across multiple database tables, ensuring zero data integrity violations in production.
- Authored and maintained comprehensive requirement documents and test scenarios aligned with business workflows and client specifications.
- Identified, documented, and tracked system defects through the full defect lifecycle, collaborating directly with developers to verify fixes and achieve timely closure.
- Supported UAT activities by verifying system behavior against client acceptance criteria, reducing post deployment issues through thorough pre release validation.
- Investigated production incidents and contributed root cause analysis findings to prevent recurrence, improving overall system stability.
- Collaborated cross functionally with engineering, product, and operations teams within an Agile workflow to ensure shared understanding of quality goals.

PROJECTS

Saucedemo E2E Automation

2026

Playwright · JavaScript · Node.js

- Designed and implemented 41 automated end-to-end test cases covering full user journeys login, inventory browsing, cart management, and checkout using Playwright with JavaScript.
- Structured tests across 4 modular spec files with reusable beforeEach hooks and helper functions, reducing test duplication and improving maintainability.
- Configured Playwright's built in HTML reporter to generate detailed test execution reports, enabling clear pass/fail visibility and defect traceability.

Medical Appointment Booking Application

2025

- Designed comprehensive test scenarios for appointment booking workflows in a React.js application, covering positive and negative user paths.
- Performed regression testing across multiple feature releases, verifying routing behavior, dynamic data rendering, and edge case handling.

EDUCATION

Bachelor of Science in Computer Science and Engineering

2018 – 2023

BRAC University
CGPA: 3.06
